

PRIVATE & CONFIDENTIAL | RAEN LUXURY FASHION

RAEN

Complete Proposal, Delivery Scope & Growth Strategy

Full 3-phase website scope with risk analysis, monthly management package, Meta ads with real market pricing, 10+ leads Month 1 plan, breakeven model and international strategy.

3 PHASES

Website build

1 WEEK

Full delivery

Rs. 50K

Monthly mgmt max

4 MONTHS

Breakeven target

FOUNDATION - WHAT IS ALREADY BUILT

The backend infrastructure is fully architected and functional. Core shopping pages are connected to the API. This proposal covers the remaining work to take it from solid foundation to a fully operational luxury store.

Backend API	60+ routes - auth, products, cart, checkout, orders, payments, admin, newsletter, contact
Database	PostgreSQL with 13 models, seeded with all 12 RAEN products, sizes, and inventory
Payments	Razorpay, PayPal, Manual UPI - all integrated at service layer
Security	JWT, bcrypt, rate limiting, CORS, Helmet headers, input validation
Email service	7 templates coded - order confirm, newsletter, contact, early access, payment updates
Shopping pages	Collections, product detail, shopping bag, checkout - all connected to backend

PART 1

Three-Phase Website Delivery

Full scope with risk analysis and budget per phase

PHASE 1 - Make It Launch Ready

Investment: Rs. 70,000

Everything required before a single real customer can safely browse, buy, and receive an order. None of these items are optional - each one either prevents a transaction from completing or leaves data in an unsafe state.

1

Product Page Navigation Repair

BROKEN LINK FIX

Links across the homepage and collections page still point to old static product pages that do not connect to the cart or checkout. Updated to route through the unified product detail system. Old redundant pages removed so the site is clean and correctly indexed by search engines.

If skipped or done incorrectly:

Customers clicking any featured product link from the homepage land on a dead page and leave. The brand loses the sale. Duplicate pages also confuse Google, actively hurting search rankings.

2

Payment Confirmation Webhooks

CRITICAL INFRASTRUCTURE

Razorpay and PayPal send a real-time confirmation signal to the backend after every successful payment. Currently this signal is received and ignored - the backend does nothing with it. Full implementation: verify the signature, update order status, reduce inventory, trigger confirmation email to the customer.

If skipped or done incorrectly:

Customer pays, sees a success screen, but internally the order stays Pending. No email is sent, stock is not reduced, admin sees nothing to dispatch. The customer emails asking where their order is.

3

Payment Database Transaction Wrapping

INFRASTRUCTURE SAFETY

The webhook process involves three sequential database writes: mark payment as paid, update order status, reduce inventory. These are wrapped in a single atomic transaction so all three succeed together or none apply. The 200 response is only sent to Razorpay/PayPal after the full transaction commits.

If skipped or done incorrectly:

Server confirms payment to Razorpay then crashes mid-update. Payment is recorded as received but the order is never fulfilled and inventory is never reduced. Impossible to reconcile cleanly at scale.

4

Customer Contact Form Connection

MISSING INTEGRATION

The contact page has a fully designed form that is not wired to the backend. Submissions go nowhere. The backend endpoint already exists and works - this connects the form to it with a proper success and error state.

If skipped or done incorrectly:

Every customer enquiry is silently lost. Customers believe they have reached the brand. For a luxury label where personal service is part of the product, this is a critical trust gap.

5

Admin Authorization Layer Verification

SECURITY AUDIT

Before building the admin UI, the database schema is inspected to confirm the admin role and permission system is correctly implemented. If the layer is incomplete a migration is run before any dashboard code is written.

If skipped or done incorrectly:

Building the admin interface on an incomplete auth layer means a regular customer account could potentially reach admin endpoints - viewing all orders or approving payments. Serious security and legal exposure.

6

Customer Login and Registration

MISSING FEATURE

No way for a customer to create an account or log in anywhere on the site. Backend auth is fully built - registration, login, JWT, logout are all functional. What is missing is the frontend: a clean modal accessible from the navigation on every page with proper session persistence across visits.

If skipped or done incorrectly:

Customers cannot track orders or return to the brand with any continuity. Repeat business is structurally impossible without accounts.

7

Customer Account and Order History Page

MISSING FEATURE

Once logged in, customers need a dedicated area for order history, order tracking, and saved addresses. Backend account and order APIs are fully implemented - this is purely the interface layer in the RAEN design language.

If skipped or done incorrectly:

Customers who create accounts gain nothing from doing so. Every order status question becomes a manual customer service email. Unmanageable at scale.

8

Admin Dashboard - Full Store Management Interface

MAJOR FEATURE BUILD

RAEN currently cannot manage their own store without a developer. The dashboard provides: live revenue and sales view, full order management with status updates, product and inventory control (add/edit/delete, update stock per size), customer list, UPI payment approval queue, contact message inbox, and early access request management. The backend for all of this is complete.

If skipped or done incorrectly:

Every order, product change, or UPI approval requires direct database access. The business cannot operate independently. Most operationally critical item.

PHASE 2 - Brand Experience & Technical Infrastructure

Investment: Rs. 40,000

Phase 2 elevates the store from functional to exceptional - protecting RAEN's discoverability, completing the refund workflow, and building the homepage to the visual standard the price point demands.

9

Product Page SEO and Social Sharing

SEO & INFRASTRUCTURE

When a product link is shared on Instagram or WhatsApp, the platform reads Open Graph meta tags to generate a preview (image, title, description). Currently product pages are rendered by JavaScript so meta tags are empty when crawlers read them. This injects correct product data into meta tags at page load so every share shows the product correctly.

If skipped or done incorrectly:

Every product link shared on social shows a blank preview - no image, no title. Kills organic reach of every share. Product pages also rank poorly in Google as crawlers cannot read dynamically rendered content.

10

Order Cancellation and Refund Flow

MISSING SCOPE

The admin dashboard covers order viewing and UPI approval but has no ability to cancel an order and issue a refund. This builds: a backend cancellation endpoint calling the Razorpay or PayPal refund API, order status update to Cancelled, inventory restoration, cancellation email to the customer, and a Cancel Order button in the admin UI.

If skipped or done incorrectly:

RAEN has no way to refund without manually logging into Razorpay or PayPal and then manually updating the database. Delayed refunds carry legal and reputational consequences under consumer protection standards.

11

Landing Page Luxury Redesign

DESIGN & FRONTEND

The current homepage is functional but does not communicate the authority of a luxury fashion house. This redesigns it with full-viewport editorial imagery, cinematic scroll-triggered transitions, refined typographic hierarchy, and interaction details matching brands like Roberto Cavalli, Bottega Veneta, and The Row. Mobile is treated as equal priority to desktop.

If skipped or done incorrectly:

A homepage that does not match the brand's price point creates an immediate trust gap. Customers arriving from editorial or social expect the digital experience to match the product. If it does not, they leave before they browse.

PHASE 3 - Virtual Fitting Room (SVG Parametric Silhouette)

Investment: Rs. 10,000 - 12,000

12

SVG Parametric Fitting Room on All Product Pages

INCLUDED FEATURE

Customer types bust, waist, hips, and height. A human body silhouette redraws live to those exact proportions. The RAEN garment overlays on it with a fit zone indicator: green for comfortable, amber for snug, red for tight. Zero ongoing cost, works on all devices, no external API dependency. Upgrade path: AI photorealistic image generation available from Rs. 6,999/month once traffic warrants it.

If skipped or done incorrectly:

Without fit guidance, hesitant customers at EUR 1,450+ do not buy. Fitting room features increase conversion 25-40% for high-value fashion.

Phase

Deliverables

Investment

Phase 1 - Make It Launch Ready	8 items	Rs. 70,000
Phase 2 - Brand Experience & Infrastructure	3 items	Rs. 40,000
Phase 3 - Virtual Fitting Room	1 item	Rs. 10,000 - 12,000
TOTAL WEBSITE BUILD		12 deliverables Rs. 1,20,000 - 1,22,000

Payment Structure

50% on project start | 50% on handover. Phases can be paid separately. Phase 2 begins only after Phase 1 is live and tested. Phase 3 runs in parallel with Phase 2. No payment is due for the next phase until the previous phase is signed off.

PART 2

Monthly Management Package

Rs. 50,000/month flat - content, strategy, SEO, reports. No hidden extras.

One flat monthly fee covers the full scope of ongoing brand management. No separate website hosting bills, tool subscriptions, or maintenance fees. Meta advertising is handled separately and transparently - see Part 3.

Growth & Strategy Package

Rs. 50,000 / month

Content Creation

- 20+ posts per month - AI model videos, reels, carousels, editorial stills, stories
- AI-generated high-quality model videos for each RAEN piece - photorealistic and cinematic
- Full content calendar with monthly campaign themes aligned to collection drops
- Colour grading, music selection, and motion timing for all video content
- Caption writing in RAEN brand voice, hashtag research, optimised posting schedule
- Meta ad creative assets - video variants, static visuals, copy versions for campaigns

Community & Influencer Growth

- Community management 7 days a week - DMs, comments, story replies handled same day
- 2 influencer outreach campaigns per month with gifting and brief coordination
- Stories strategy daily - polls, countdowns, Q&A, behind-the-brand content
- Trending audio research and integration for Reels algorithm performance
- Pinterest board management for international luxury fashion search discovery

Strategy, SEO & Reporting

- Weekly SEO performance report - keyword rankings, page visibility, organic search traffic
- Monthly business strategy report - what sold, what did not, clear action plan for next month
- Competitor analysis monthly - what luxury brands in the same segment are doing
- Analytics deep-dive with specific, prioritised action items per platform
- Bi-weekly strategy consultation call - review numbers and adjust direction together

What is NOT included in Rs. 50,000

Meta and Instagram paid advertising campaign management and ad spend budget. See Part 3 for the two options. Both keep total costs lower than a full-service agency while using all the content and data we produce.

PART 3

Meta Ads Strategy & Real Market Pricing

Honest numbers based on current freelancer and agency market rates

Meta ads campaign management requires dedicated expertise in audience targeting, bid strategy, A/B testing, and daily optimisation. This is a full discipline separate from content creation. We produce all creative assets and performance data - the campaign management runs via one of the two options below.

REAL MARKET RATES - WHAT EXPERIENCED SPECIALISTS CHARGE

Based on current Upwork, Contra, and direct market data for India-based and international Meta ads professionals with luxury/e-commerce experience:

Profile	Monthly Fee
India - Entry level (0-2 yrs, basic campaigns)	Rs. 25,000 - 40,000/month
India - Mid level (2-4 yrs, e-commerce focus)	Rs. 40,000 - 70,000/month
India - Senior (4+ yrs, luxury/international)	Rs. 70,000 - 1,20,000/month
International freelancer (Upwork, full service)	Rs. 1,35,000 - 4,50,000/month
Full-service agency (India)	Rs. 80,000 - 2,00,000/month + % of spend

TARGET: 10+ QUALIFIED LEADS IN MONTH 1

Qualified leads = people who clicked through to a product page and added to cart or started checkout, or who sent a direct purchase enquiry via DM or WhatsApp. Not just impressions or profile visits.

Metric	Value
Recommended Month 1 ad spend	Rs. 25,000 - 40,000
Platforms	Instagram (primary) + Facebook retargeting
CPL benchmark - luxury fashion, new pixel, intl audience	Rs. 2,500 - 4,000 per lead
Expected leads from this budget (Month 1)	7 - 16 leads (avg 10+)
Month 2+ CPL as pixel warms up	Rs. 1,500 - 2,500 per lead (30-40% drop)
Same budget by Month 3 - expected leads	15 - 26 leads per month

Month 1 is the pixel learning phase - Meta's algorithm needs 50+ conversion events to exit learning mode. CPL is highest in Month 1 and drops steadily as the algorithm learns who your buyers are. Budget consistency in Month 1 is more important than budget size.

OPTION A - HIRE AN EXPERIENCED META ADS SPECIALIST

We source and brief an experienced specialist. Because we provide all creative assets, audience data, and monthly performance reports, their scope is reduced to campaign setup, audience targeting, bid management, and daily optimisation. This meaningfully reduces their fee compared to a full-service engagement - but a realistic reduced-scope rate for someone qualified for luxury/international campaigns is still significantly higher than entry-level quotes.

What the specialist handles

- Campaign structure, ad set architecture, audience targeting (lookalikes, interest, retargeting)
- Daily bid management and budget pacing across UAE, UK, US, and India markets
- A/B testing ad sets and creative variants using assets we produce
- Weekly performance review using our analytics reports
- Scaling winning campaigns, pausing underperforming sets

Component	Monthly Cost
Specialist fee - reduced scope (we provide all assets)	Rs. 35,000 - 60,000/month
Ad spend budget (actual Meta spend)	Rs. 25,000 - 40,000/month
Our management package	Rs. 50,000/month
TOTAL - Option A	Rs. 1,10,000 - 1,50,000/month

OPTION B - CLAUDE AI-POWERED AGENT FOR META ADS

A Claude AI agent is configured to manage the Meta ads account - monitoring performance daily, adjusting bids, pausing underperforming ad sets, and scaling winning creatives automatically. Setup and ongoing maintenance of the agent is included in our management package. No separate specialist fee required.

What the AI agent handles

- Daily campaign performance monitoring across all ad sets and regions
- Automated bid adjustments based on CPA and ROAS thresholds we configure
- Pauses underperforming creatives, scales winning ones using rules we set
- Weekly performance summary generated and shared for your review
- We review and refine the agent's rules monthly based on results

Component	Monthly Cost
AI agent setup + ongoing maintenance	Included in Rs. 50,000 package
Ad spend budget (actual Meta spend)	Rs. 25,000 - 40,000/month
Our management package	Rs. 50,000/month
TOTAL - Option B	Rs. 75,000 - 90,000/month

Recommendation

Start with Option B in Month 1 and 2. The AI agent handles optimisation while the pixel is learning. Once the account has 60+ days of data and consistent spend, evaluate whether a human specialist adds enough lift to justify the additional Rs. 35,000-60,000/month. Many brands stay on Option B permanently at this stage with excellent results.

PART 4

Breakeven Analysis

Based on Rs. 6-7L existing investment + 4 months running costs

The breakeven calculation accounts for the full Rs. 6.5L already invested plus 4 months of management. At Rs. 50,000/month (management only, excluding Meta ad spend which is variable and optional), the breakeven target requires a very small number of sales.

Rs. 6.5L ALREADY INVESTED	Rs. 2.0L 4-MONTH MGMT COST	Rs. 8.5L TOTAL TO RECOVER	Rs. 75,000 NET PER SALE	12 Total MIN SALES NEEDED
--	---	--	--	--

PER-SALE CONTRIBUTION CALCULATION

Gross revenue at EUR 1,450 avg (Rs. 90/EUR)	Rs. 1,30,500
Cost of goods - production (35% estimate)	- Rs. 45,675
Payment gateway fees (2.5%)	- Rs. 3,263
International shipping per order (avg)	- Rs. 5,000
Net contribution per sale	Rs. 76,562 (~Rs. 75,000)

MONTH-BY-MONTH TRAJECTORY

Month	Sales Target	Contribution	Mgmt Cost	Cumul. Recovery
Month 1	3-5 sales	Rs. 2.25-3.75L	Rs. 50,000	Rs. 1.75-3.25L
Month 2	5-8 sales	Rs. 3.75-6.0L	Rs. 50,000	Rs. 5.0-8.75L
Month 3	8-12 sales	Rs. 6.0-9.0L	Rs. 50,000	Rs. 9.5-16.75L
Month 4	12-20 sales	Rs. 9.0-15.0L	Rs. 50,000	Rs. 17.0-30L

Minimum	3 consistent sales/month
Full breakeven end of Month 4	
Realistic	5-8 sales/month
Investment recovered mid Month 3	
Aggressive	15-20 sales by Month 4
Investment recovered in Month 2	

Note: Breakeven model uses Rs. 50,000/month management cost only. Meta ad spend (Rs. 25,000-40,000/month) is excluded as it is variable and optional in Month 1. Including average ad spend of Rs. 32,000/month adds approximately 2-3 more sales to the breakeven requirement - still achievable within the 4-month window even at the minimum scenario.

PART 5

Execution - 7-Day Plan & International Strategy

Website and content launch simultaneously.
Three markets from Day 1

7-DAY DELIVERY PLAN

Website build and social content run in parallel. The site goes live to an audience that has already seen the brand - not into silence.

Days 1-2 Fixes + Homepage + First Content Drop

- Fix all broken links, contact form, delete 12 static product pages
- Implement payment webhooks with full database transaction wrapping
- Begin homepage luxury redesign - full-viewport hero, editorial product sections
- CONTENT: 3 editorial posts live, first Reel posted, Stories Q&A active

Days 3-4 Accounts + Admin Dashboard + AI Model Videos

- Customer login/register modal - minimal, brand-consistent
- Account page with full order history and address management
- Admin dashboard: revenue view, order management, product control, UPI approvals
- SVG virtual fitting room integrated on all product pages
- CONTENT: First AI model video posted, brand story carousel live, 10 influencer DMs sent

Days 5-6 Testing + Polish + Content Scheduling

- Mobile responsiveness across all pages - iPhone and Android tested
- End-to-end purchase test: browse through to order confirmation email receipt
- SMTP configured with RAEN credentials - all 7 email templates tested live
- 2 additional reels pre-scheduled for Days 8 and 10
- Email blast to early access waitlist: RAEN launches in 48 hours

Day 7 Go Live + Announce

- Final sign-off on every page and every link - checkout tested on real device
- Website live on production domain with SSL confirmed
- Launch Reel posted and pinned - reveal format, high production value
- WhatsApp broadcast to personal network and early buyers

INTERNATIONAL GROWTH STRATEGY

RAEN is priced in EUR and positioned as a luxury label - the natural customer is international. Three priority markets have the highest probability of early sales with targeted effort from Month 1.

Middle East - UAE, Saudi Arabia, Qatar

Highest per-capita luxury fashion spend globally. Instagram and WhatsApp are the primary discovery channels. Indian designers have strong brand recognition and aspirational value here.

- Post at UAE/KSA peak times (6-9pm GST) - schedule content around this
- Use Dubai Mall and Burj Khalifa area location tags on editorial posts
- WhatsApp Business for direct VIP buying - personal stylist experience
- Target Dubai-based micro-influencers with Indian fashion audience (50k-300k)
- DHL Express shipping - 3-5 day delivery to UAE and KSA, show clearly on checkout
- Arabic captions in Stories occasionally - signals intentional market focus

United Kingdom & Europe

Natural market for EUR-priced luxury. Strong Indian diaspora with high disposable income in London, Birmingham, and Manchester. UK fashion media is approachable for independent luxury labels.

- Pitch to Vogue UK, Tatler, and Harper's Bazaar UK for editorial consideration
- Pinterest luxury fashion boards with UK and European keyword targeting
- TikTok Shop UK - active fashion discovery channel, less saturated than Instagram
- Target NRI communities in major UK cities via interest-based Meta audiences
- Explore Net-a-Porter or Matches Fashion for stocking conversations at 20+ sales/month
- EU VAT and customs note on checkout page - builds trust with transparent pricing

United States

South Asian diaspora in NYC, LA, Bay Area, Chicago, Houston is affluent and highly fashion-conscious. Wedding season (May-June, Nov-Dec) drives high purchase intent for luxury occasion wear.

- Target South Asian fashion communities on Instagram and Pinterest
- Pitch to Brown Girl Magazine, Desi Collective, South Asian lifestyle media
- Collaborate with Indian-American influencers in NYC and LA (10k-100k)
- USD pricing displayed alongside EUR on the checkout page
- FedEx International shipping - 5-7 day delivery with full tracking
- Wedding season campaign drops: March for May-June, September for Nov-Dec

RAEN is ready. The plan is complete. The window is now.

Website live in 7 days. Content from Day 1. Real audience building before launch. At Rs. 50,000/month management, breakeven needs only 12 total sales across 4 months - less than 1 sale per week. The Middle East, UK, and US are ready to receive RAEN the moment it goes live. Every decision here protects the investment already made and builds something that grows well beyond it.
